

Glidecoat Top Coating is engineered to add additional Gloss & Shine for a new boat, but also restore an older boats original color, while enhancing the Gloss and protecting the Gel Coat for up to 18 months from UV damage, acid rain, salt, bird droppings, leaf stains, lake scum, etc.

1

Remove extensive staining and dirt by pre-washing (or power wash) before moving to **Step 2** (Nano Wash). If pre-washing, use degreaser or heavy detergent. Rinse boat thoroughly with water.

BEFORE

2

Add 3 - 4 oz. of **Glidecoat Nano Wash** in a 5 gallon bucket of water. Then use a soft to medium brush to wash the entire boat removing all dirt, salt, and stains. Once complete, use a chamois or towel to dry the entire boat.

3

Before proceeding with **Step 3**, make sure all surfaces are smooth and uniform. If any paint correction is needed this is when it should be completed.

Use **Glidecoat Nano Compound** and a machine buffer, or DA, with medium cut foam or wool pad. This step should remove any sun damage, chalkiness or imperfections, and all surface scratches. **Note:** Use medium speed and medium pressure for best results. The entire boat should have a smooth uniform finish before moving to the next step and ALL oxidization must be removed before proceeding. *If the boat has severe oxidization, this step may need to be repeated or a heavier compound used.*

4

In **Step 4**, use **Glidecoat Nano Polish** with a machine buffer and a clean light cut foam pad. This step will enhance shine and remove any remaining marks, light scratches or stains. Repeat second time, if necessary, to make sure all imperfections have been removed. **Note:** *Glidecoat Nano Polish will remove any remaining contaminants, swirl marks or imperfections from compounding.*

5

For **Step 5**, we will use the surface decontaminate **Glidecoat Surface Wipe**. At this stage it is recommended that protective gloves and eye wear be worn. **Note:** *If boat has leftover dust from the compound/polish preparation a light wash with **Glidecoat Nano Soap** is necessary before this step.*

Applying **Glidecoat Surface Wipe** (de-contaminate) before coating. Surfaces have been compounded and polished.

A) Apply **Glidecoat Surface Wipe** by spraying evenly on the surface in areas not exceeding 3' by 3'. This process will decontaminate the surface, and remove any contaminants left over from the compounding and polishing steps.

B) Using a clean white cotton cloth and wipe evenly across the sprayed surface, leaving no residue behind. Repeat if necessary.

6

Start by mixing Part B into Part A. The mix ratio should be 50/50. Shake well after mixing and use the mixed product within 7-10 days. Do not leave the bottle open or exposed to air as the humidity in the air, will cause the product to cure.

7

Ongoing Maintenance – Use **Marine Shine & Shield** to enhance and maintain your finish. The product is a soft polymer and simply enhances and helps maintain the coating. Spray on every 6-8 months to help prolong the coating. Application is a simple spray on and wipe off. We also suggest you use a Non Abrasive soap to clean the boat such as **Glidecoat Nano Wash**.

COMPLETED
